

UTCI cells (felt heat, D11 area-weighted) over gridMET city limits (actual temperature) and METAR airports (visibility)

UTCI for a city = area-weighted average of every ERA5-HEAT 0.25° cell touching city limits (D11). Sources: Copernicus ERA5-HEAT time series v1.1; U.S. Census TIGER/Line 2025 Places; IEM ASOS metadata; Natural Earth 1:50m state outlines.
